

Semantic UI是什麼？

- 一個前端開發的framework
- 使RWD(Responsive Web Design)自適應網頁開發變得方便
- RWD簡單說是設計在各種裝置上適合瀏覽的網頁

Semantic UI的優點

1.好用的Grid system

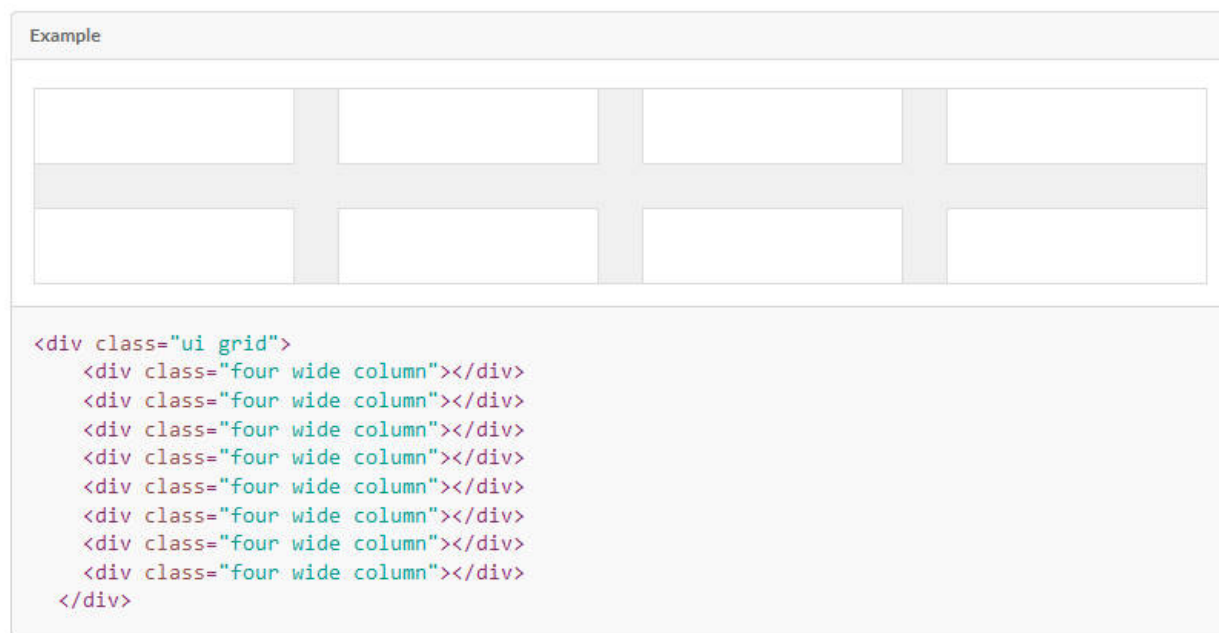

- grid system 將一列區分為16個欄位共16等份
- 宣告不同的class達到不同的寬度與排列效果
- 宣告的class名稱可依需求作微調

- ### ○ 宣告方式

```
<div class="ui grid">
</div>

<div class="ui page grid">
</div>

<div class="ui two column grid">
</div>
```

Example

```
<div class="ui page grid">
  <div class="four wide column"></div>
  <div class="four wide column"></div>
  <div class="four wide column"></div>
  <div class="four wide column"></div>
  <div class="four wide column"></div>
  <div class="four wide column"></div>
  <div class="four wide column"></div>
  <div class="four wide column"></div>
</div>
```

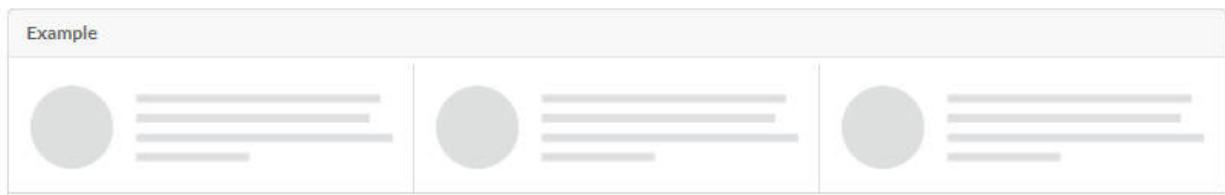

Example

```
<div class="ui two column grid">
  <div class="column"></div>
  <div class="column"></div>
  <div class="four column row">
    <div class="column"></div>
    <div class="column"></div>
    <div class="column"></div>
    <div class="column"></div>
  </div>
</div>
```

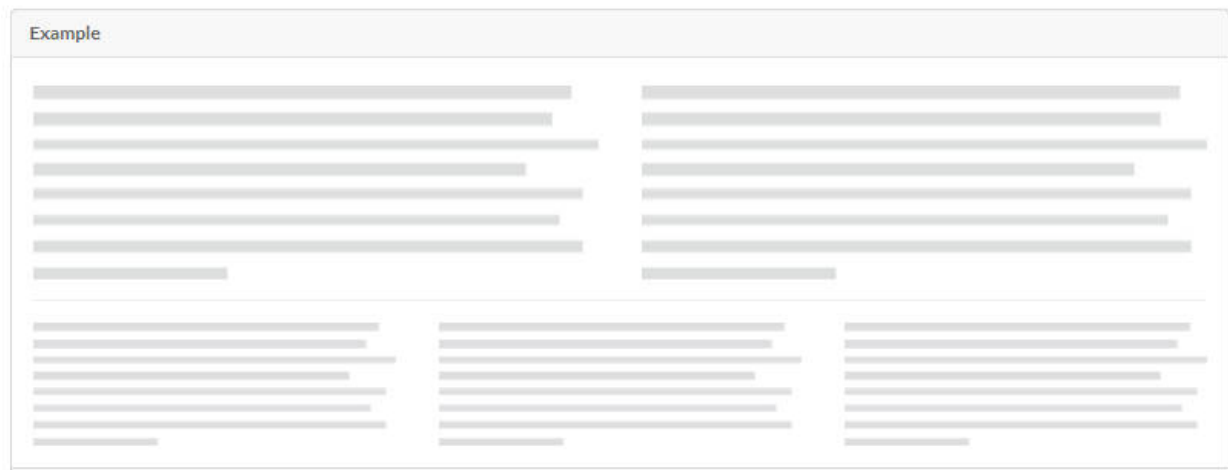

◦ Grid様式

■ Divided Grid

■ Vertically Divided Grid

A grid can have dividers between rows

- Celled Grid

A grid can have rows divided into cells

- Internally Celled Grid

A grid can have rows divisions only between internal rows

2.Tag套用樣式限制少並簡潔

- button

Example

Follow

```
<div class="ui button">
  Follow
</div>
```

- label

Example

 23

```
<div class="ui label">
  <i class="mail icon"></i> 23
</div>
```

- list

Example

New York City
A lovely city

Chicago
Also quite a lovely city

Los Angeles
Sometimes can be a lovely city

San Francisco
What a lovely city

```
<div class="ui list">
  <div class="item">
    <div class="header">New York City</div>
    A lovely city
  </div>
  <div class="item">
    <div class="header">Chicago</div>
    Also quite a lovely city
  </div>
  <div class="item">
    <div class="header">Los Angeles</div>
    Sometimes can be a lovely city
  </div>
  <div class="item">
    <div class="header">San Francisco</div>
    What a lovely city
  </div>
</div>
```

與Bootstrap的差異

1. grid system

- 欄位數

- grid system 將一列區分為12個欄位共12等份,

- 用不同的prefix class配上不同數字達到不同的寬度與排列效果
- 不同名稱的prefix class對應不同的裝置

.col-md-1	.col-md-1	.col-md-1	.col-md-1	.col-md-1	.col-md-1	.col-md-1	.col-md-1	.col-md-1	.col-md-1	.col-md-1	.col-md-1	.col-md-1
.col-md-8									.col-md-4			
.col-md-4				.col-md-4				.col-md-4				
.col-md-6						.col-md-6						

◦ 宣告方式

```
<div class="container">
  ...
</div>
<div class="container-fluid">
  ...
</div>
```

.col-xs-12 .col-md-8						.col-xs-6 .col-md-4					
.col-xs-6 .col-md-4				.col-xs-6 .col-md-4				.col-xs-6 .col-md-4			
.col-xs-6						.col-xs-6					

```
<!-- Stack the columns on mobile by making one full-width and the other half-width -->
<div class="row">
  <div class="col-xs-12 col-md-8">.col-xs-12 .col-md-8</div>
  <div class="col-xs-6 col-md-4">.col-xs-6 .col-md-4</div>
</div>

<!-- Columns start at 50% wide on mobile and bump up to 33.3% wide on desktop -->
<div class="row">
  <div class="col-xs-6 col-md-4">.col-xs-6 .col-md-4</div>
  <div class="col-xs-6 col-md-4">.col-xs-6 .col-md-4</div>
  <div class="col-xs-6 col-md-4">.col-xs-6 .col-md-4</div>
</div>

<!-- Columns are always 50% wide, on mobile and desktop -->
<div class="row">
  <div class="col-xs-6">.col-xs-6</div>
  <div class="col-xs-6">.col-xs-6</div>
</div>
```

Copy

- Grid樣式:無
- 其他特色:
 - Nestable

Level 1: .col-sm-9	
Level 2: .col-xs-8 .col-sm-6	Level 2: .col-xs-4 .col-sm-6

```
<div class="row">
  <div class="col-sm-9">
    Level 1: .col-sm-9
    <div class="row">
      <div class="col-xs-8 col-sm-6">
        Level 2: .col-xs-8 .col-sm-6
      </div>
      <div class="col-xs-4 col-sm-6">
        Level 2: .col-xs-4 .col-sm-6
      </div>
    </div>
  </div>
</div>
```

Copy

■ Semantic UI相同效果

```
<div class="ui grid">
  <div class="twelve wide column">
    Level1: 12 column
    <div class="ui grid">
      <div class="eleven wide column">
        Level2: 11 column
      </div>
      <div class="five wide column">
        Level2: 5 column
      </div>
    </div>
  </div>
</div>
```

■ Offsets

Move columns to the right using `.col-md-offset-*` classes. These classes increase the left margin of a column by `*` columns. For example, `.col-md-offset-4` moves `.col-md-4` over four columns.

.col-md-4	.col-md-4 .col-md-offset-4
.col-md-3 .col-md-offset-3	.col-md-3 .col-md-offset-3
.col-md-6 .col-md-offset-3	

```
<div class="row">
  <div class="col-md-4">.col-md-4</div>
  <div class="col-md-4 col-md-offset-4">.col-md-4 .col-md-offset-4</div>
</div>
<div class="row">
  <div class="col-md-3 col-md-offset-3">.col-md-3 .col-md-offset-3</div>
  <div class="col-md-3 col-md-offset-3">.col-md-3 .col-md-offset-3</div>
</div>
<div class="row">
  <div class="col-md-6 col-md-offset-3">.col-md-6 .col-md-offset-3</div>
</div>
```

Copy

■ Semantic UI相同效果

```
<div class="ui grid">
  <div class="four wide column">
```

```

        four wide column
    </div>
    <div class="eight wide column">

    </div>
    <div class="four wide column">
        four wide column
    </div>
</div>

```

■ Column ordering

Easily change the order of our built-in grid columns with `.col-md-push-*` and `.col-md-pull-*` modifier classes.

<code>.col-md-3 .col-md-pull-9</code>	<code>.col-md-9 .col-md-push-3</code>
---------------------------------------	---------------------------------------

```

<div class="row">
  <div class="col-md-9 col-md-push-3">.col-md-9 .col-md-push-3</div>
  <div class="col-md-3 col-md-pull-9">.col-md-3 .col-md-pull-9</div>
</div>

```

Copy

■ Semantic UI相同效果

```

<div class="ui grid">
  <div class="right floated twelve wide column">
    twelve wide column
  </div>
  <div class="left floated four wide column">
    four wide column
  </div>
</div>

```

2. Tag套用樣式

◦ button

Use the button classes on an `<a>`, `<button>`, or `<input>` element.

EXAMPLE

Link Button Input Submit

```

<a class="btn btn-default" href="#" role="button">Link</a>
<button class="btn btn-default" type="submit">Button</button>
<input class="btn btn-default" type="button" value="Input">
<input class="btn btn-default" type="submit" value="Submit">

```

◦ label

Example heading New

Example heading New

Example heading New

Example heading New

Example heading New

Example heading New

```
<h3>Example heading <span class="label label-default">New</span></h3>
```

◦ list

EXAMPLE

Cras justo odio

Dapibus ac facilisis in

Morbi leo risus

Porta ac consectetur ac

Vestibulum at eros

```
<ul class="list-group">
  <li class="list-group-item">Cras justo odio</li>
  <li class="list-group-item">Dapibus ac facilisis in</li>
  <li class="list-group-item">Morbi leo risus</li>
  <li class="list-group-item">Porta ac consectetur ac</li>
  <li class="list-group-item">Vestibulum at eros</li>
</ul>
```
